PROGRAM STUDI S1 INFORMATIKA

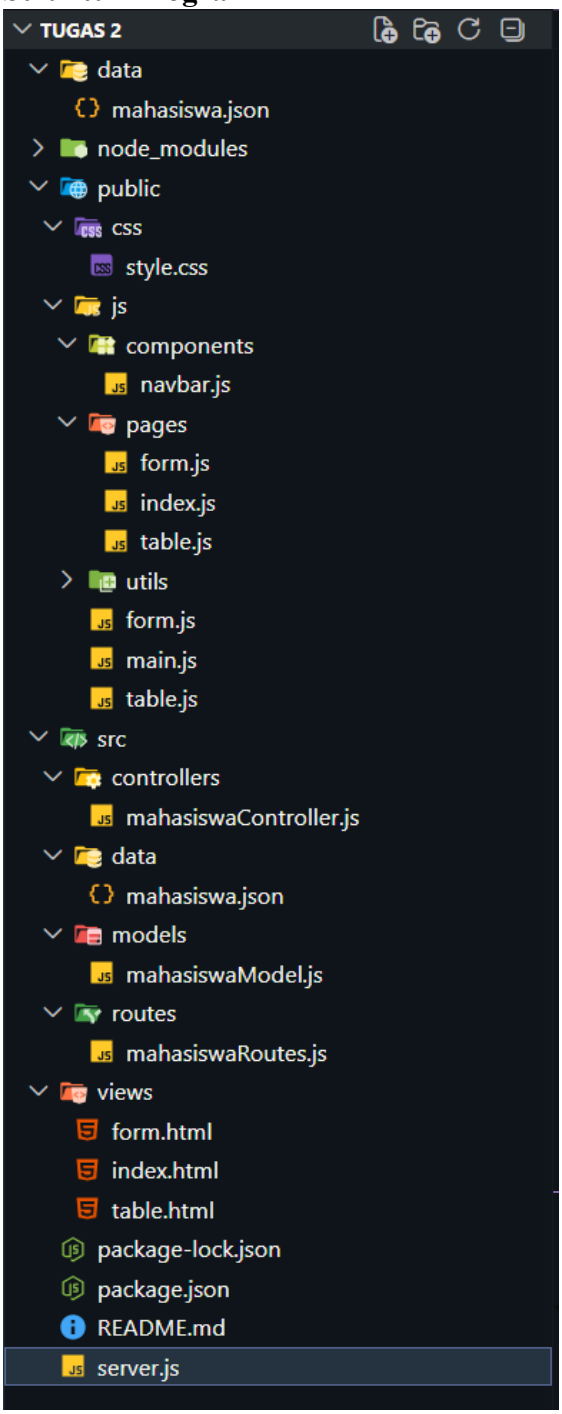
FAKULTAS INFORMATIKA

INSTITUT TEKNOLOGI TELKOM PURWOKERTO

2023/2024

Code Program

1. Struktur Program



Pada gambar diatas merupakan aplikasi web berbasis Node.js yang mengimplementasikan arsitektur *Model-View-Controller* (MVC) dengan pemisahan yang jelas antara *backend* (sisi peladen) dan *frontend* (sisi klien).

Berikut adalah rincian fungsionalitas dari setiap komponen dalam struktur tersebut:

1. Konfigurasi dan *Entry Point (Root Directory)*

   Pada tingkat utama (*root*), terdapat beberapa berkas esensial untuk menjalankan aplikasi:

   - server.js: Berfungsi sebagai berkas utama (*entry point*) untuk menginisialisasi dan menjalankan peladen (server) aplikasi.
   - package.json & package-lock.json: Berkas konfigurasi Node.js yang menyimpan informasi metadata proyek dan daftar *dependencies* (pustaka pihak ketiga) yang digunakan.
   - node_modules/: Direktori yang memuat seluruh pustaka dan package yang diinstal berdasarkan package.json.
   - README.md: Berkas markdown yang umumnya digunakan untuk menuliskan dokumentasi atau panduan penggunaan proyek.

2. Arsitektur *Backend* (Direktori src/)

   Direktori src/ memuat logika utama aplikasi sisi peladen (*backend*), yang secara terstruktur menerapkan pola MVC:

   - controllers/ (mahasiswaController.js): Mengatur alur logika antara Model dan View. Berfungsi memproses permintaan masuk (request) dan mengembalikan respons yang sesuai.
   - models/ (mahasiswaModel.js): Merepresentasikan struktur data dan menangani logika yang berhubungan langsung dengan manipulasi data mahasiswa.
   - routes/ (mahasiswaRoutes.js): Berfungsi untuk mendefinisikan titik akhir (endpoints/URL) dari aplikasi dan mengarahkannya ke fungsi controller yang tepat.
   - views/ (form.html, index.html, table.html): Menyimpan berkas kerangka antarmuka pengguna berbasis HTML.
   - data/ (mahasiswa.json): Bertindak sebagai database sementara (berbasis file JSON) untuk menyimpan dan membaca data mahasiswa dalam lingkup backend. (Catatan: Terdapat juga direktori data dengan fungsi serupa di tingkat root aplikasi).

3. Aset Statis *Frontend* (Direktori public/)

   Direktori public/ didedikasikan untuk menyimpan aset-aset statis yang akan disajikan ke peramban (browser) klien:

   - css/ (style.css): Menyimpan aturan *Cascading Style Sheets* untuk mengatur tampilan visual halaman web.
   - js/: Direktori skrip sisi klien (client-side) yang diorganisasi secara modular:
   - components/: Menyimpan skrip untuk elemen antarmuka yang dapat digunakan ulang (*reusable*), seperti navbar.js.
   - pages/: Menyimpan skrip spesifik untuk setiap halaman (form.js, index.js, table.js).
   - utils/: Umumnya berisi fungsi-fungsi bantuan (*helper*).

4. Source Code Program (Function View/)
